# CONTENTS OF VOLUME 18

NUMBER 1, APRIL 1975

HARRY C. DORN, LARRY SIMERAL, J. JOHN NATTERSTAD, AND GARY E. MACIEL. A Simple Spectrometer Modification for Multinuclide FT Operation . . . . .	1
LYNN PENN AND FRANK B. MALLORY. Chemical Shift Measurements of Substi- tuent Effects on Out-of-Plane Magnetic Shielding in Benzene Derivatives . . . . .	6
KARL-ÅKE THUOMAS AND ANDERS LUND. Evaluation of Hyperfine and Quad- rupole Tensors from ENDOR Measurements on Single Crystals . . . . .	12
M. GOLDMAN, J. F. JACQUINOT, M. CHAPELLIER, AND VU HOANG CHAU. Non- linear Effects in Spin Temperature . . . . .	22
W. G. WALLER AND MAX T. ROGERS. Methods for Determining Axial $g$ Tensors . . . . .	39
G. VÖLKE, W. WINDSCH, AND W. URBANOWITSCH. Dynamics of the Irradia- tion Defect Centers in Potassium Dihydrogen Phosphate Observed by EPR . . . . .	57
V. P. TARASOV AND S. I. BAKUM. The Mean Excitation Energy for the $MH_4$ -Ions . . . . .	64
ANIL KUMAR, DIETER WELTI, AND RICHARD R. ERNST. NMR Fourier Zeugmato- graphy . . . . .	69
IRA B. GOLDBERG, HARRY R. CROWE, AND RICHARD S. CARPENTER, II. Computer Control of Electron Spin Resonance Spectroscopy . . . . .	84
C. SCHUMANN, H. DREESKAMP, AND K. HILDENBRAND. Anisotropy of Indirect Carbon-Mercury and Carbon-Carbon Nuclear Spin Coupling Constants in Dimethyl Mercury . . . . .	97
J. R. BLACKBOROW. Nuclear Magnetic Resonance Studies of Chemical Exchange and Boron-Quadrupole-Induced Relaxation in Tertiary Amine Adducts of Boron Trihalides . . . . .	107
JOHN A. WEIL. Comments on Second-Order Spin-Hamiltonian Energies . . . . .	113
SUSAN S. CHANG, NORMAN C. LI, AND DAVID W. PRATT. An EPR Study of Man- gane (II) Binding to 5'-ATP, Hemoglobin, and Hemocyanin . . . . .	117
F. HOLUJ AND C. T. KWAN. Polytypism and the ESR of $Fe^{3+}$ in $Ca(OH)_2$ . . . . .	123
J. CHANDRASEKHAR, N. CHANDRA KUMAR, AND S. SUBRAMANIAN. EPR of Man- gane (II) in Tetramethylammonium Tetrachlorozincate II) . . . . .	129
R. K. HARRIS, N. C. PYPER, AND K. M. WORVILL. High Resolution NMR Studies of Relaxation Using Saturation. Part III. Application to a $^2A^2B^3X$ Spin System, 2-Bromothiazole . . . . .	139

JOHN R. SHOCK AND MAX T. ROGERS. Carbon-13 Hyperfine Interactions and Structure of the Complex Ion $[\text{Co}(\text{CN})_6]^{4-}$ . . . . .	157
FRANKLIN E. BARTON, II, DAVID S. HIMMELSBACH, AND DONALD BURDICK. Determination of the <i>Cis-Trans</i> Composition of Methyl Oleate and Methyl Elaidate by $^{13}\text{C}$ NMR . . . . .	167
C. SHUMANN AND F. CAVAGNA. Non-Bond F-F Nuclear Spin Couplings. I. Hexafluoropropene Dimers . . . . .	172
CHESTER ALEXANDER, JR., AND HENRY L. PUGH, JR. Digitally Controlled Recorder-Driver for ESR/ENDOR Experiments . . . . .	185
ARNO BUNDI, CHRISTOPH GRATHWOHL, JIRI HOCHMANN, REGULA M. KELLER, GERHARD WAGNER, AND KURT WÜTHRICH. Proton NMR of the Protected Tetrapeptides TFA-Gly-Gly-L-X-L-Ala-OCH <sub>3</sub> , Where X Stands for One of the 20 Common Amino Acids . . . . .	191
COMMUNICATIONS	
D. CANET, GEORGE C. LEVY, AND IAN R. PEAT. Time Saving in $^{13}\text{C}$ Spin-Lattice Relaxation Measurements by Inversion-Recovery . . . . .	199
GEORGE C. LEVY, IAN R. PEAT, RICHARD ROSANSKE, AND STEVEN PARKS. A High Efficiency Broadband Decoupling Scheme . . . . .	205
T. BUNDGAARD AND HANS J. JAKOBSEN. Direct Observation of Hidden Lines in $^{13}\text{C}$ FT NMR by Selective Population Transfer (SPT) Intensity Enhancement and Difference Spectroscopy . . . . .	209
JOHN G. BATCHELOR. Downfield $\delta$ "Steric" Shifts in the $^{13}\text{C}$ NMR of Acyclic Molecules . . . . .	212
BOOK REVIEW	
"Critical Evaluation of Chemical and Physical Structural Information." Edited by David R. Lide, Jr., and Martin A. Paul . . . . .	215

## NUMBER 2, MAY 1975

K. M. WORVILL. The NMR Multiple Quantum Spectrum of a Three-Spin System . . . . .	217
C. JANET GIFFNEY AND CHARMIAN J. O'CONNOR. Substituent Effects on the NMR Spectra of Substituted Acetanilides and Phenylureas . . . . .	230
J. A. VAN WYK. Temperature Dependence of EPR Linewidths of Manganese Impurities in Ammonium Chloride . . . . .	235

C. W. HAIGH, J. HILTON, L. H. SUTCLIFFE, AND G. J. T. TIDY. A Positive "Through-Space" Fluorine-Fluorine Coupling Constant in Perfluorotoluene . . . . .	241
LEON L. FINCH, DON A. HAMPTON, AND GRACE C. MOULTON. Electron Spin Resonance Studies of Oxamic Acid Single Crystals X-Irradiated at 77K . . . . .	248
P. SMITH, R. A. KABA, T. C. SMITH, J. T. PEARSON, AND P. B. WOOD. EPR Study of Radicals Formed from Aliphatic Nitriles . . . . .	254
W. S. GLAUNSINGER. EPR Study of Exchange Interactions in $\text{Eu}_x\text{Yb}_{1-x}\text{B}_6$ . . . . .	265
D. L. DE FONTAINE, D. K. ROSS, AND B. TERNAI. A Fast Non-Linear Least Squares Method for the Calculation of Relaxation Times . . . . .	276
SHINZABURO ONDA, RYUICHI IKEDA, DIAYU NAKAMURA, AND MASAJI KUBO. Nuclear Quadrupole Resonance of Nitrogen-14 in Some Acetonitrile Derivatives . . . . .	282
G. C. UPRETI. Intensities of Allowed Hyperfine Transitions and Intensities and Doublet Separations of Forbidden Hyperfine Transitions in the EPR of $\text{Mn}^{2+}:\text{Zn}(\text{CH}_3\text{COO})_2 \cdot 2\text{H}_2\text{O}$ Single Crystals . . . . .	287
JEFFREY A. LYON, R. BRUCE DUNLAP, AND PAUL D. ELLIS. Assignment of the Carbon-13 Nuclear Magnetic Resonance Spectra of Selected Folates . . . . .	293
Y. RIONEL AND V. BOUFFARD. First Moments of NMR Lines for Highly Polarized Nuclei: A Rigorous Version of the "Local Field" . . . . .	304
A. ROCKENBAUER AND P. SIMON. Linewidth Variations of ESR Spectra in Solid State . . . . .	320
K. AKASAKA, T. IMOTO, S. SHIBATA, AND H. HATANO. Deuterium Substitution Effect on Relaxation Times (DESERT) and its Application to the Study of Conformation of Some Purine Nucleoside Derivatives . . . . .	328
D. BAILEY, A. D. BUCKINGHAM, F. FUJIWARA, AND L. W. REEVES. High-Resolution Nuclear Magnetic Resonance Spectra of Tetrahedral Molecules and Ions in Anisotropic Environments . . . . .	344
A. REUVENI, R. POUPKO, AND Z. LUZ. ESR of $^{17}\text{O}$ -Labeled $\text{NO}_2^-$ Radicals Trapped in Single Crystals of Potassium Azide . . . . .	358
ROBERT L. LICHTER. Nitrogen-15 Magnetic Resonance Spectroscopy. Applicability of Nitromethane as an Internal Chemical Shift Reference . . . . .	367
VICTOR WRAY AND DAVID N. LINCOLN. The Complete $^{13}\text{C}$ , $^9\text{F}$ and $^1\text{H}$ Spectral Analysis of the Fluorobenzenes $\text{C}_6\text{H}_n\text{F}_{6-n}$ . I. 1,3,5-Trifluorobenzene . . . . .	374
JENS SPANGET-LARSEN AND JENS A. PEDERSEN. Solvent Sensitivities of the Hyperfine Constants of Methyl- and <i>t</i> -Butyl-Substituted 1,4-Benzosemiquinones . . . . .	383
K. T. SUZUKI, L. W. CARY, AND K. F. KUHLMANN. Carbon-13 Relaxation in Doubly Labeled Sodium Acetate . . . . .	390

## COMMUNICATIONS

H. J. SCHNEIDER, W. FREITAG, AND M. SCHOMMER. A Chemical Shift $^{13}\text{C}$ MR Thermometer. The TMS $^{13}\text{C}$ Shifts Dependence on Absolute Temperature . . . . .	393
WILLIAM H. PIRKEL AND MARVIN S. HOEKSTRA. Carbon-13 Nonequivalence of Enantiomers in Chiral Solvents . . . . .	396
HERMANN E. BLEICH AND J. A. GLASSEL. Water Resonance Suppression in Proton Fourier Transform NMR Using a JEOL PFT-100 . . . . .	401
YU. N. LUZIKOV, N. M. SERGEYEV, AND YU. A. USTYNYUK. Proton-Selectively Decoupled $^{13}\text{C}$ NMR Spectra as a Tool in the Analysis of Complex PMR Spectra . . . . .	406

## NUMBER 3, JUNE 1975

P. MEAKIN AND J. P. JESSON. Computer Simulation of Multipulse and Fourier Transform NMR Experiments. IV. Some Simulations Including the Time Development of the Off-Diagonal Density Matrix Elements . . . . .	411
JAU-MIN GUO, RICHARD F. SPRECHER, AND NORMAN C. LI. Magnetic Resonance Study of 5'-ATP Binding to Hemocyanin . . . . .	427
ERIK ODGAARD, THOR B. MELØ, AND THORMOD HENRIKSEN. Effect of Exchange on the ESR Spectrum of Nitroxide Spin Labels in the Liquid State . . . . .	436
NAN-I LIU AND J. JONAS. High Pressure NMR Study of Molecular Motions and Glass Transition in Several Elastomers . . . . .	444
D. F. COOKE AND K. R. JEFFREY. Nitrogen and Chlorine Spin-Lattice Relaxation in $\text{ND}_4\text{Cl}$ . . . . .	455
F. GERSON, J. JACHIMOWICZ, K. MOEBIUS, R. BIEHL, J. S. HYDE AND D. S. LENIART. Applications of ENDOR Spectroscopy to Radicals of Low Symmetry: Radical Anions of 2-Phenylcycl[3.2.2]azines . . . . .	471
HENRY M. VAN DRIEL, MARILYN M. MCENNAN, AND ROBIN L. ARMSTRONG. Lattice Dynamical Model Calculation of the Angular Vibrational Amplitude of the Re-Cl Bond in $\text{K}_2\text{ReCl}_6$ . . . . .	488
IRA B. GOLDBERG AND HARRY R. CROWE. An Inexpensive Method of Improving Magnet Performance for ESR Spectroscopy . . . . .	497
GEORGE C. LEVY AND IAN R. PEAT. The Experimental Approach to Accurate Carbon-13 Spin-Lattice Relaxation Measurements . . . . .	500
R. A. DEMARCO, W. B. FOX, W. B. MONIZ, AND S. A. SOJKA. Carbon-13 NMR Spectra of Trifluoromethanes . . . . .	522
H. FRITZ AND H. SAUTER. Off-Resonance Decoupling in ABX Spin Systems . . . . .	527

F. F. HUBBLE III AND W. G. MOULTON. $^{19}\text{F}$ Nuclear Spin-Lattice Relaxation in Superconducting and Normal Tungsten Fluoroxide Bronzes . . . . .	545
---------------------------------------------------------------------------------------------------------------------------------------------------------	-----

## COMMUNICATIONS

DONALD C. CHANG AND CARLTON P. HAZLEWOOD. Comments on PMR Studies of Tissue Water . . . . .	550
ROBERT E. LONDON, NICHOLAS A. MATWIYOFF, VICTOR H. KOLLMAN AND DELBERT D. MUELLER. Differential Nuclear Overhauser Enhancement for $^{13}\text{C}$ Singlet and $^{13}\text{C}$ - $^{13}\text{C}$ -Multiplet Resonances of a Carboxyl Carbon . . . . .	555
R. J. C. BROWN. $\text{NH}_4\text{ReO}_4$ : Anomalous Dependence of the NQR Frequency on State Variables . . . . .	558
E. O. STEJSKAL AND JACOB SCHAEFER. Removal of Artifacts from Cross-Polarization NMR Experiments . . . . .	560
CLAUDE GIESSNER-PRETTRE AND BERNARD PULLMAN. A Molecular-Orbital Study of the Ortho-Benzyllic Long-Range Proton-Proton Coupling Constants $^4J_{\text{HH}}$ in Biological Phenethylamines . . . . .	564

## BOOK REVIEW

"Specialist Periodical Reports. Nuclear Magnetic Resonance Volume 3" Edited by R. K. Harris. . . . .	569

## Information for Authors

The *Journal of Magnetic Resonance* includes original papers, both full articles and communications, dealing with the theory, techniques, methods of spectral analysis and interpretation, spectral correlations, and results of magnetic resonance spectroscopy and related fields. Submission of a manuscript to the *Journal* implies that none of the content has been published or is under consideration for publication elsewhere, except as specifically indicated by the author. The Editor seeks the assistance of expert referees in the evaluation of manuscripts of articles, but he alone is responsible for the final decision concerning acceptance.

Communications are preliminary accounts of work of special importance or contain discussion of controversial subjects. Communications must be especially carefully and concisely prepared; since they may not be refereed, it is the responsibility of the author to ensure that the manuscript as originally submitted is free of typographical or substantive errors. To save time in publication, proofs of communications are not sent to the authors for correction.

Fifty reprints of each paper are supplied without charge, and additional reprints may be ordered on a form which is sent to the author. For articles, the reprint order form accompanies the galley proofs which the author receives. The *Journal assesses no page or publication charges*.

All manuscripts and books for review should be sent to the Editor, Wallace S. Brey, Department of Chemistry, University of Florida, Gainesville, Florida 32611.

### Arrangement of the Paper

If the paper is lengthy, it should be divided into sections, although it is preferred that the sections not be numbered. Tables are numbered consecutively with *Arabic* numerals and are to be mentioned in order in the text. Each table should be supplied with a title. Figures are also numbered consecutively with *Arabic* numerals and are mentioned in order in the text. Each regular article requires an abstract which should describe concisely the substantive content, the conclusions reached, and the contributions of the research described. Since the abstract may be used directly by Chemical Abstracts and other abstracting services, it must be self-contained, having no references to formulas, equations, or bibliographic citations which appear in the body of the manuscript.

Literature references are cited in numerical order in the text by *in-line, parenthesized, italic numerals*. References to "unpublished" or "to be published" work from the author's laboratory should not be given. However, dissertations may be cited, or papers actually accepted may be referred to as "in press" if the name of the journal is included.

Authors are urged to give careful thought to the logical construction of the manuscript, so that explanatory or parenthetical footnotes need not be employed—where possible, such material should be incorporated in the text. Any footnotes which are indispensable are not intermixed with references, but are indicated in the text by consecutive, superscript numerals, and each footnote will then appear in print at the bottom of the page on which it is cited. Equation numbers are given in *square* brackets to the right of the equation, and references in the text to equations should be in the form "Eq. [3]."

### Form of Manuscript

Manuscripts should be submitted in triplicate. The *original typewritten copy* should be supplied; mimeo, electrostatic, and similar process reproductions are not usually sufficiently clear. All of the typing must be *double-spaced*, including that of abstract, references, and footnotes, on one side of good quality paper approximately 22 × 28 cm (8.5 × 11 in.) in dimensions. The first line of each paragraph is indented.

Each page of the manuscript should be numbered. The first page contains the article title, the author's name, and affiliation. At the bottom of this page should appear any footnotes to the title (indicated by superscript \*, †, ‡); the number of manuscript pages, figures, and tables should also be noted. The second page should contain the abstract of 50–200 words and a proposed running head (abbreviated title) of less than 42 characters.

*Symbols and Abbreviations.* The American Chemical Society's Handbook for Authors, 1967 edition, or the Style Manual of the American Institute of Physics should be followed for standard abbreviations, names, and symbols for units. Mathematical equations or symbols must be typewritten whenever possible. Greek letters may be identified in pencil in the margin. The author of any manuscript in

which there are mathematical equations or symbols is urged to supply a list of these on a separate sheet for the assistance of the printer in selecting the proper type. The list will not appear in print.

*References and Footnotes.* References to the literature should be cited in order in the text by in-line, parenthesized numerals. The references themselves are to be typed double-spaced on a separate sheet in numerical order. Each reference contains the author's initials, last name, journal name, volume, initial page number, and year in parentheses, *in that order*. The name of the journal is abbreviated in the style of Chemical Abstracts' *Service Source Index* (1969 Edition). For book references, the form is author's name, name of the book in quotation marks, editor's name (if any), edition if other than the first, chapter or page number, publisher's name, place of publication, and year of publication.

Any footnotes which are included are numbered in a sequence separate from the references and must be typed in the manuscript on a separate page.

*Tables.* Tables should be laid out carefully, so that minimum space is used and entries are accurately grouped and clearly labeled. Usually, a table should be arranged vertically, with more rows than columns. Vertical lines are not used to separate the columns. Each table is numbered with an Arabic numeral, provided with a title, and typed on a separate sheet of paper. Footnotes to the table are placed directly below it and are indicated by superscript, lower-case, italic letters (<sup>a</sup>, <sup>b</sup>, <sup>c</sup>). Tables that are longer than two manuscript pages will be reproduced photographically, and should therefore be typed in the exact form desired. All such tables should be carefully checked since errors cannot be corrected in proof.

*Figures.* Figures must be carefully drawn in black, waterproof drawing ink, to draftsman's standards, with lettering by stencil or drawing machine. Freehand, penciled, or typewritten lettering is not acceptable. Lettering should include numerical scales and units required for the two axes, and should be large enough to be legible after reduction by 50–60%. The illustration copy should be on sheets of the same size as that on which the manuscript is typed. Smaller figures may be mounted on sheets of the required size, and larger originals may be handled by supplying glossy, high-contrast, photographic reductions. The original and two duplicates of each figure are required.

*Diagrams.* Ink drawings should be supplied for any complex molecular formulas or diagrams involving material which the printer cannot readily set in type.

*Proofs.* Galley proofs will be sent to the author with reprint order forms. Fifty reprints of each article will be supplied free of charge.
